

Prevention of a Novel Coronavirus Infection

Infection Level Raised to the Critical Level

Below are the steps to follow
in order to prevent Coronavirus infections.

- As the number of people infected is on the rise, please make sure to:
- wash your hands and cover your mouth when coughing
 - wear a mask when visiting medical institutions especially for those with respiratory symptoms
 - follow preventive measures of coronavirus infection such as informing medical institutions regarding your overseas travel history

***** Please refrain from visits to China ******

Within 14 days after your return from China:

- 1) You are asked to self-quarantine for 14 days if you travelled to Hubei Province
- 2) It is strongly recommended that you self-quarantine for 14 days **even if you** have no symptoms after traveling to other parts of China other than Hubei Province

- In the case of developing fever and/or respiratory symptoms (cough, sore throat, difficulty breathing, etc) within 14 days after your visits to China,
- please AVOID going to a medical clinic. Instead, please report to the Korea Center for Disease Control & Prevention (KCDC) by calling 1339 (24 hours operation offering English Services) or the local Health Center.
